PROFESSIONAL SUMMARY

Full Stack Software Developer with 2+ years of experience designing, building, and maintaining scalable web applications, RESTful APIs, and enterprise financial/ERP systems using React.js, Redux, Node.js, Express.js, NestJS, MongoDB, and MySQL. Proven experience building complex MongoDB aggregation pipelines, role-based access control (RBAC), multi-tenant data scoping, and financial reporting modules for production-grade SaaS platforms. Strong background in secure application development, REST API design, database optimization, and cross-functional Agile collaboration across the full software development life cycle (SDLC).

CORE TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Java, SQL

Frontend: React.js, Redux, Redux Toolkit, HTML5, CSS3, Bootstrap, Material-UI, Responsive Web Design, Single Page Applications (SPA)

Backend: Node.js, Express.js, NestJS, RESTful API Design, Microservices Architecture, WebSockets

Databases: MongoDB, Mongoose ODM, MongoDB Aggregation Framework, MySQL, NoSQL Database Design, Data Modeling, Query Optimization

Cloud, DevOps & Tools: AWS S3, Firebase, Git, GitHub, Postman, CI/CD, Agile/Scrum, JIRA

Security: JWT Authentication, OAuth, Data Encryption, Role-Based Access Control (RBAC)

Other: Financial Systems / FinTech / ERP Development, AI API Integration, Excel Reporting (ExcelJS), Third-Party API Integration, System Design, Performance Optimization, Full Stack Development (MERN)

PROFESSIONAL EXPERIENCE

Software Developer

Accucia Softwares Pvt. Ltd. | June 2024 – Present

- Developed and maintained scalable full-stack features using React.js, Redux, Node.js, Express.js, NestJS, and MongoDB across multiple enterprise-grade, multi-module web applications; designed and optimized RESTful APIs to improve backend response efficiency and maintainability.
- Implemented data encryption and secure storage mechanisms for sensitive user and financial data, and integrated AWS S3 for scalable, secure file storage, reducing local server load.
- Designed and developed "PLACTU," a full-stack financial planning and accounting management platform (NestJS/MongoDB backend and React.js/Redux frontend) used by finance teams to model, generate, and track large-scale financial data:
 - Built a dynamic, formula-driven configuration engine letting finance teams define custom revenue/expense rules mapped to responsible persons and departments.
 - Engineered MongoDB aggregation pipelines (\$lookup, \$facet, \$unwind, \$group) powering paginated, grouped financial reports across business units, projects, and buildings.
 - Developed a loan calculation module supporting multiple amortization and distribution strategies for construction and hospitality finance schedules.
 - Designed and implemented a granular Role-Based Access Control (RBAC) system scoping financial data by a company-category-to-business-unit hierarchy across list, export, and dashboard APIs.

- Built server-side Excel export pipelines (ExcelJS) and integrated third-party accounting software for automated ledger reconciliation.

Software Developer – Trainee

Creazione Software Pvt. Ltd. | Oct 2023 – Apr 2024

- Developed web modules using Java, JSP, Servlets, and MySQL for enterprise business applications.
- Implemented backend workflows and secure data handling features following standard SDLC practices.
- Collaborated with cross-functional team members in an Agile environment to deliver features on schedule.

KEY PROJECTS

Ticket Raising & Complaint Management System

Tech Stack: React.js, Node.js, Express.js, MongoDB

- Built a role-based (Admin / Support Executive / End User) ticket lifecycle system with priority/status tracking and operational dashboards.
- Developed REST APIs and optimized MongoDB queries for efficient ticket handling.

AI Chatbot Platform

Tech Stack: React.js, Node.js, Express.js, MongoDB, REST APIs, AI API Integration

- Built an AI-powered chatbot with real-time messaging, conversation history, and session management, integrating third-party AI APIs for contextual response generation.
- Built scalable backend APIs and a responsive React.js frontend with secure authentication.

Gas Station & Mess Management Systems

Tech Stack: Java, JSP, Servlet, MySQL, Firebase

- Built two full-stack academic ERP-style applications — a fuel station operations system (inventory, billing, sales tracking) and a student mess management system (meal scheduling, billing, attendance) — each with an admin panel, secure authentication, and reporting dashboards.
- Optimized MySQL schema and queries for reliable, efficient data management in both systems.

EDUCATION

B.Tech, Computer Engineering — 78%

Shreeyash College of Engineering and Technology | 2023
